DATA_HANDLING_AND_VISUVALIZATION_LAB_21-25

21)Dataset: Energy_Consumption_Data.csv

1. Import the dataset in R. Plot a histogram and density plot for Units_Consumed. Compare consumption patterns.

2. Using R programming, create a scatter plot between Temperature and Units_Consumed. Represent Peak_Hours using bubble size. Apply transparency.

3. Using R, calculate average Renewable_Usage for each Sector. Create a bar chart. Interpret renewable energy adoption.

Set 22: Time Series Analysis

Dataset: Monthly Sales Data

1. In R, create a time series line chart to visualize the trend in monthly sales. Label the axes and title the chart.

2. In R, generate a scatter plot to analyze the relationship between advertising budget and monthly sales. Explain any insights.

4. In R, create an autocorrelation plot to identify seasonality in the time series data.

Set 23: Employee Performance Analysis

Dataset: Employee Performance

1. In R, create a bar chart to visualize the distribution of employees across different departments. Label the chart elements.

2. In R, generate a line chart to visualize the performance trend of employees over time. Label the axes and title the chart.

4. In R, develop a table showing the performance data for each employee. Label the table elements.

Set 24 Product Inventory Management

Dataset: Product Inventory

1. In R, create a bar chart to visualize the quantity of each product in the inventory. Label the axes and title the chart.

2. In R, generate a stacked bar chart to show the quantity of each product within different product categories.

4. In R, create a scatter plot to explore the relationship between product price and quantity available. Explain any insights.

Set 25: Website Traffic Analysis

Dataset: Website Traffic

2. In R, generate a bar chart to show the top N days with the highest click-through rates. Label the chart elements.

3. In R, build a stacked area chart to display the distribution of user interactions (likes, shares, comments) on the website.
